BOPLA: ENCLOSURES WHICH PROVIDE A HOME FOR ELECTRONICS.

BOPLA
enclosures ■ content matters

BOPLA enclosures stand out thanks to their high quality and design. Together with our customers' electronics, the result is something very special – and this says a lot about how we evaluate the market and serve our customers.

For more than 40 years, BOPLA Gehäuse Systeme GmbH has been developing and manufacturing electronic enclosures and HMI devices for industries and applications included in the safety, telecommunications, automotive and medical technology sectors. With more than 25,000 articles, BOPLA is one of the leading suppliers in this field.

We have 170 employees at the Bünde/East Westphalia site who work closely with 220 colleagues in our global production, sales and marketing organisations. Since 1977 the company has been part of Switzerland's Phoenix Mecano group, which operates worldwide.

PHILOSOPHY: SIMPLY BEING AMONG THE BEST.

Our recipe for success isn't a secret – we always want to be one of the best. That is both our goal and our motivation, because in a global economy it is vital to recognize trends and developments at an early stage and to implement suitable solutions. In addition to excellent construction solutions, it is our high standards of quality which secure our position in the market.

What is our most important resource when it comes to meeting our customers' requirements? It is our employees, with their knowledge, experience and ideas. Our headquarters in Bünde/East Westphalia is ideally situated for this, because our economic region is well-known for determination and ingenuity, even if many of those who envy us think that we are stubborn.

Our employees also include tomorrow's specialists – our apprentices! We focus and rely on qualified training in a range of careers.

QUALITY: RESULTS FROM THE BEST INGREDIENTS.

BOPLA quality control starts at the very beginning and this is why we only work with certified suppliers. By using highly-efficient quality management processes, we create standards which are far higher than the minimum legal requirements. For this reason, certification according to DIN EN ISO 9001:ff is self-evident for us.

Strict quality controls are the hallmark of both development in Germany and the sourcing and manufacturing processes which take place at the group's own production sites. This is where the heart of all subsequent processes is created – the enclosure.

Wide-ranging test facilities in the in-house laboratories ensure minimal fault tolerances and maximum BOPLA quality. After all, this is what our customers have come to expect from us – so why should we change anything?

CLOSE TO THE CUSTOMER – **WORLDWIDE.**

BOPLA combines the virtues of a medium-sized company with the advantages of a concern which operates worldwide. Fast, flexible and innovative – but also well networked, both locally and around the world. As a subsidiary of the Swiss company Phoenix Mecano AG with its approximately 6,000 employees, BOPLA can call on production and marketing sites in all important markets.

This simplifies the logistics and also makes it possible to satisfy the customers' requirements in the target markets. For example, products are developed and produced on-site for the growing Asian markets.

We know that responsibility doesn't end at the factory gates – this is why we feel great responsibility towards our employees and the company.

By means of sustainable actions and responsible treatment of natural resources, we want to play our part in protecting and conserving what is valuable.

Certification according to DIN EN ISO 14001:ff is a vital part of this for us.

USING **VISION** TO GROW CLOSER.

Only those who have a clearly-defined goal know which direction to take. And it is something we can only achieve by working together with our customers, for example, when we develop today the products which are needed for tomorrow.

This is why it is so important for us to start cooperation with our customers during the planning and development phase. This helps our designers and technicians to work out new concepts and ideas.

In this way, joint visions become reality, day by day.
